

Matthew K. McGrath

matthew.k.mcgrath3@gmail.com | (480) 276-3183

Education

Bachelors in Software Engineering

Brigham Young University - Idaho

July 2021 - December 2026

Rexburg, ID - Remote

- Completing coursework while maintaining full-time employment
-

Software Engineering Experience

Full Stack Engineering Intern

Meritus360 - Full

January 2026 - Present

Remote

- Develop full-stack web application features using React frontend and .NET (C#) REST APIs
- Build UI components and integrate with PostgreSQL backend to deliver end-to-end features
- Designed and deployed a Slack-integrated uptime monitoring bot for critical systems, reducing downtime from hours to ~5 minutes by enabling real-time outage alerts to development team

Sentinel - Monitoring System

Personal Project - github.com/mkmcgrath/sentinel

January 2026 - Present

Mesa, AZ

- Conceived and architected a distributed monitoring platform spanning 3 physical nodes, managing a self-hosted stack including Nextcloud, Jellyfin, Pi-hole, and Traefik
- Engineered a lightweight Python agent deployed via systemd on nodes, collecting CPU, memory, disk, and network metrics from the Linux /proc filesystem with zero external dependencies
- Designed and built a FastAPI/PostgreSQL backend with a RESTful API, and developed both a terminal UI (TUI) and web dashboard frontend for real-time visibility into node health
- Spearheaded full DevOps lifecycle including Docker Compose orchestration, SSH hardening, UFW firewall configuration, and static network topology across all 3 nodes

Full Stack Engineering Intern

The Wolff Company - Full

January 2023 - August 2023

Scottsdale, AZ

- Collaborated building internal software systems using .NET and React Native
 - Managed in building and maintaining 5+ application features in a collaborative development environment
 - Collaborated in sprint planning and weekly engineering progress reviews
-

Technical Skills

- Language & Frameworks: C#, Javascript, React, .NET, React Native
 - Backend & Databases: Linux, REST APIs, PostgreSQL, SQL, Git, API Development
-

Additional Experience

Manufacturing Operator (PGV)

Intel

July 2025 - December 2025

Chandler, AZ

- Coordinated automated material transport using PGV systems in a high-volume semiconductor fab
- Maintained efficient workflow under strict production timelines and cleanroom protocols, adapting to shifting priorities daily
